

The week in Britain

Shows increase

Of television throughout the world owned by British and some of the United States had a total capacity at the beginning of 1965 of 127 million seats—more than double of about 62 million seats on the comparable figure for 1954.

New Royal carpet

A new Royal carpet, 141 feet in length, has been installed on the palace gallery at the Palace of Westminster, London. The Queen Elizabeth II, who has been wearing the decorative carpet since the 17th century gallery of high quality woolen carpeting. The carpet is woven right through to the back, a method which makes the carpet more durable and gives an effect rather similar to that of a hand-made carpet.

Exports of wool

Exports of wool from the U.K. to Canada have been at their highest this year. The latest figures from the U.K. Board of Trade in London show that in the first six months of this year the value of wool and other animal hair exports to Canada amounted to more than \$3.4 million. This figure is a record for the corresponding period of any year.

Herald prototype

One of the highlights of the Society of British Aircraft Constructors' conference at Farnborough was the first public appearance of the prototype Herald page Herald. This new engine-driven aircraft has been a success ever since it reached the Farnborough show and given an effect rather similar to that of a hand-made carpet.

Racing at Dundrod

One of the seven international events of the World Sports Car Championship, the United States Trophy Race for production sports cars, was held at Dundrod, Northern Ireland on the 19th of May. The race was won by the American driver, Jim McKeown, who drove a Ford Mustang. The race was held at Dundrod, Northern Ireland on the 19th of May. The race was won by the American driver, Jim McKeown, who drove a Ford Mustang.

Increased sales

The popularity of British goods in Canada has been at its highest this year. The latest figures from the U.K. Board of Trade in London show that in the first six months of this year the value of British goods exports to Canada amounted to more than \$3.4 million. This figure is a record for the corresponding period of any year.

Flax exhibition

Exhibition of British flax in the United Kingdom has been at its highest this year. The latest figures from the U.K. Board of Trade in London show that in the first six months of this year the value of British flax exports to the United Kingdom amounted to more than \$3.4 million. This figure is a record for the corresponding period of any year.

British Columbia fishermen

British Columbia fishermen have been at their highest this year. The latest figures from the U.K. Board of Trade in London show that in the first six months of this year the value of British fish exports to the United Kingdom amounted to more than \$3.4 million. This figure is a record for the corresponding period of any year.

Man-made 'radar islands' to guard east coast coast from air defence net

By LEONARD J. SUTHER (CSP Correspondent)

THE UNITED STATES now expects an intensified battle has been fought in the North Atlantic. The world's first man-made "radar islands" erected off the Atlantic coast, the summer.

The first island—concrete and steel—is a chain of permanent structures "watching point" in the North Atlantic. The first island—concrete and steel—is a chain of permanent structures "watching point" in the North Atlantic. Tweed basic fabrics for fall wardrobes

Tweed, a traditional fabric for fall suits and coats, will make its autumn debut in a variety of styles. The model, here, wears a classic black and white tweed suit with a wide lapel and a wide collar. The suit is made of a heavy, textured tweed fabric. The model is wearing a dark hat and a white shirt with a dark tie.

Time has come to consider exploitation of the north

STANSTEAD, Que. — Man survived in the north of Canada for thousands of years, but it is only now that the north is being considered for exploitation of natural resources of the north, relates a *Canadian Press* story.

Capacity storage cheap

Many farmers will not have enough room in their granaries to store their grain. The solution is to use the space in their barns to store their grain. This is a cheap and easy way to increase storage capacity.

Bull terrier living it up on interest from 50,000 dollars

CLEARWATER, Fla. — A black and white Boston bull terrier named Duffy is living like a king at this Gulf coast resort. He has a right to. He has \$50,000 stashed away and is living off the interest, about \$1,500 a year, a United Press story relates.

You can buy an adult bull terrier for \$1,500. Duffy is one of the richest dogs in the world. He has inherited his money. There are others like him, but none so rich as Duffy, the black and white, horned and square-jawed remembrance of the wilds of other centuries.

A small named Lasso and his three dogs was much for a living in ending his days around a \$1,000 trust fund in Quincy, Mass. Those who at Franklin, N.J., are having up cream paid for from a \$15,000 bequest.

The bulk of a million dollar estate is supporting eight horses, 25 dogs, more dobermans and goats and an uncountable number of turkeys on a 270-acre farm at Framingham, Mass.

Such animals are aristocrats of the "hard and fast" world. Most pets in America—and dogs in particular—live on the "easy money" plan. They need no money. They are the "good graces" of their owners.

Only a few have their livelihood secured by the power of property.

Duffy is one of these dogs. Duffy is used to be \$50,000 when Mrs. Mary E. Morrow died 15 years ago, leaving a bequest of \$128,350. This was the widow of a Canadian millionaire. George Morrow, who made a fortune in "Gold Dust" paper.

Left \$1,000,000

One of the biggest animal philanthropists came last year when John H. McManis, a Massachusetts sportsman, died, leaving the bulk of his \$1,000,000 estate to the horse dogs and other animals on his 200-acre "Ranchman" estate at Framingham.

More with which better known animals in general are being provided each year. There are now some thousands of funds for such organizations as the American Society for Prevention of Cruelty to Animals.

The Spector himself in New York, operated by the New York Welfare League for Animals, has \$100,000 in funds for the care of the animals.

The Spector himself is a part of the fund. He has a facility for 200 million per year. He has a facility for 200 million per year. He has a facility for 200 million per year.

More than 20 British hospitals are now making artificial radioactivity. Some of the radioactivity is used to produce such units.

The radioactivity source is a salt of the alkali metal sodium, melted in a glass and poured into a tube about an inch in diameter. The tube is then sealed and the sodium is then used to produce such units.

It is not known that the sodium is then used to produce such units. It is not known that the sodium is then used to produce such units.

Can keep heart beating 109 hours

TORONTO, Ont. — A new electronic device has been invented that can keep the human heart beating for as long as 109 hours, according to a report from the American and Pharmaceutical Information Bureau received by the Health League of Canada.

This is much longer than any previous means of artificial heart stimulation has been able to accomplish. The inventor, called the "electric pacemaker," has already used it successfully in the treatment of 27 cases in which the heart was not beating at its normal rate. The pacemaker is used by applying 100 metal electrodes to the chest of the patient. The current is furnished and the machine is set at a pace of 109 hours, or even half that long.

The inventor reports that he has used the device in cases where the heart has stopped beating during an anesthetic, surgery, or because of chest injury. The device is called the "electric pacemaker," and is an improvement on the heart's pumping action.

From time to time, the physician examines the patient's heart. In most cases, it is not necessary to use the machine for as long as 109 hours, or even half that long.

67 NATIONS REPRESENTED

Canada host to 8th World Scout Jamboree

This week, in the shadow of the big white of Niagara-on-the-Lake, the 8th World Scout Jamboree, Canada played host to over 12,000 Boy Scouts and Scouters in the 8th World Scout Jamboree. Opened by Canada's Chief Scout, Governor-General Vincent Massey, the "Jamboree" was the largest gathering of Scouts in the world since the 1929 Jamboree in France. Scouts from 67 nations, including Canada, the United States, and many others, gathered in the shadow of the big white of Niagara-on-the-Lake. The Jamboree was the largest gathering of Scouts in the world since the 1929 Jamboree in France. Scouts from 67 nations, including Canada, the United States, and many others, gathered in the shadow of the big white of Niagara-on-the-Lake.

Radioactive salt cancer treatment

BOSTON. — British hospitals are to get a new radioactive salt for the treatment of deep-seated cancer, reports Canadian Press.

The salt capsule is larger than four lumps of sugar yet equal to 100 grains of radium, to be used by British hospitals as an alternative to "brachy" sodium products. At the outset, one capsule is used to produce such units.

The radioactive source is a salt of the alkali metal sodium, melted in a glass and poured into a tube about an inch in diameter. The tube is then sealed and the sodium is then used to produce such units.

It is not known that the sodium is then used to produce such units. It is not known that the sodium is then used to produce such units.

More than 20 British hospitals are now making artificial radioactivity. Some of the radioactivity is used to produce such units.

This is what happens inside the pickle fork

An understanding of what actually happens in the diet pickle fork makes pickling more interesting as well as more secure.

Since Joyce Lewis, nutritionist with the Alberta department of Agriculture, points out that the old-fashioned diet pickle is the product of a fermentation process, bacteria grow and feed on the cucumber. Bacteria break down the cucumber, and the acid content of the brine is very important in preventing the activity of the bacteria from affecting the pickles. Water that is already available on a cucumber is a large amount of water per quart of water will prevent the bacteria in the water, including the bacteria produced acid, from causing the cucumber to rot.

It is the preserving part of the whole process that is not allowed to remain the pickles become soft and mushy. It is because of the acid content of the brine is very important in preventing the activity of the bacteria from affecting the pickles. Water that is already available on a cucumber is a large amount of water per quart of water will prevent the bacteria in the water, including the bacteria produced acid, from causing the cucumber to rot.

One more reason, the pickles must be completely covered with brine. If the pickles are not covered with brine they are exposed to the bacteria and will spoil. The pickles must be completely covered with brine. If the pickles are not covered with brine they are exposed to the bacteria and will spoil.

Right diet, not over-eat, lose weight

TORONTO, Ont. — Eating in moderation and movement is the key to weight loss, according to a report from the Health League of Canada.

The report states that the key to weight loss is not over-eating, but rather, eating in moderation and moving more. The report states that the key to weight loss is not over-eating, but rather, eating in moderation and moving more.
